

Citations beyond WoS: A delineation of non-source citations in political science

The 19th Nordic Workshop on Bibliometrics and Research Policy
25 - 26 September 2014 in Reykjavík, Iceland

Pei-Shan Chi
ECOOM, KU Leuven, Waaistraat 6, Leuven (Belgium)
iFQ, Schützenstraße 6, Berlin (Germany)

From non-source items to non-source citations

Data collection

- Publication lists from
 - 2 top-ranking institutions in Germany
 - Department of Political Science at Mannheim University
 - Institute of Political Science at University of Münster
 - 33 professors
 - 1,015 publications published from 2003 to 2007

Individual

- researchers' official websites (CVs)

Institutional

- institutional repositories

National

- German Social Science Literature Information System (SOLIS) by GESIS

- Collected publication lists were sent to professors for verification

Citation collection

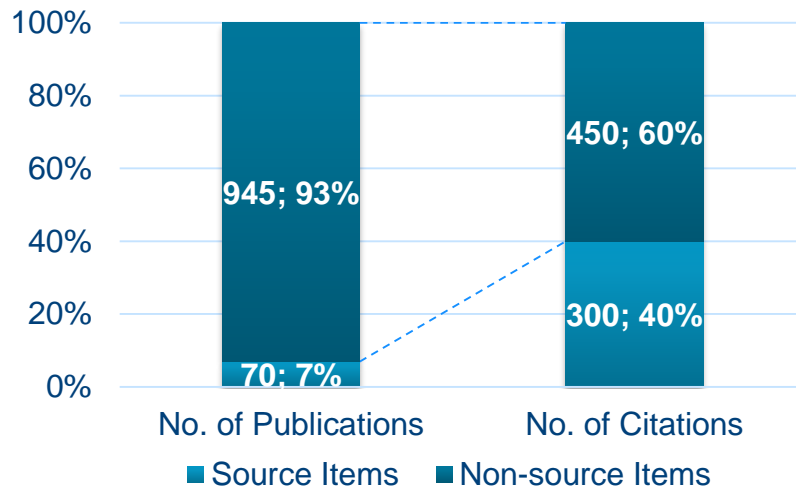

- **WoS citations (w/o Book Citation Index)**
 - References of WoS papers & citations of all publications
 - from the 2012 version of the WoS in-house database of Kompetenzzentrum Bibliometrie
 - citation period: 2003-2011
 - sliding 4-year citation window
 - author self-citations are included (20%)
- **BKCI citations**
 - were obtained from the WoS web version on 29th of January, 2014
- **Google Scholar citations**
 - were obtained from Google Scholar on 3rd of September, 2013

Increase in publications and citations due to inclusion of non-source items

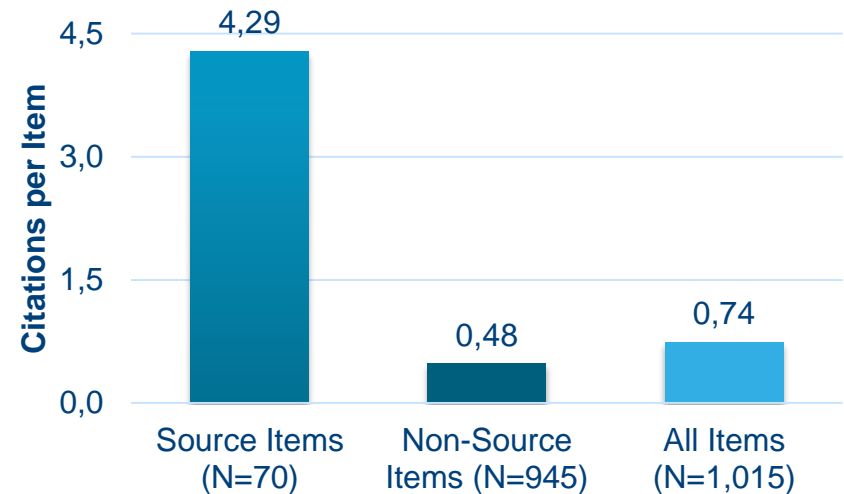

Samples	Field	Time Span	Publications	Citations
2 Australian Univs*	Politics & Policy	1997, 1999	+481%	+242%
2 German Univs**	Political Science	2003-2007	+1350%	+150%

40% of German publications are in English

Shares of source items and non-source items in numbers of publications and citations

Average citation rates of political science publications in Germany

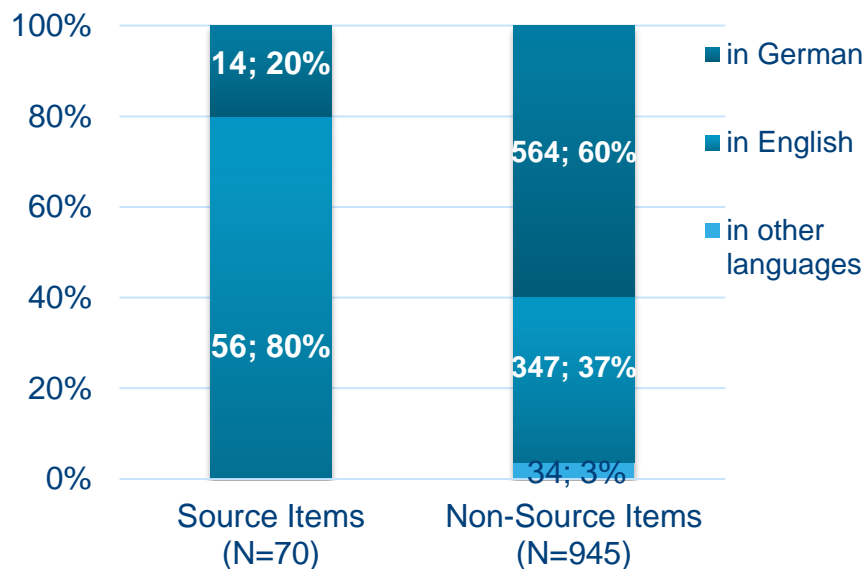

*Butler, L., Visser, M. S. (2006). Extending citation analysis to non-source items. *Scientometrics*, 66(2), 327-343.

**Chi, P.-S. (2014 Sep). Which role do non-source items play in the social sciences? A case study in political science in Germany. *Scientometrics*.

Language

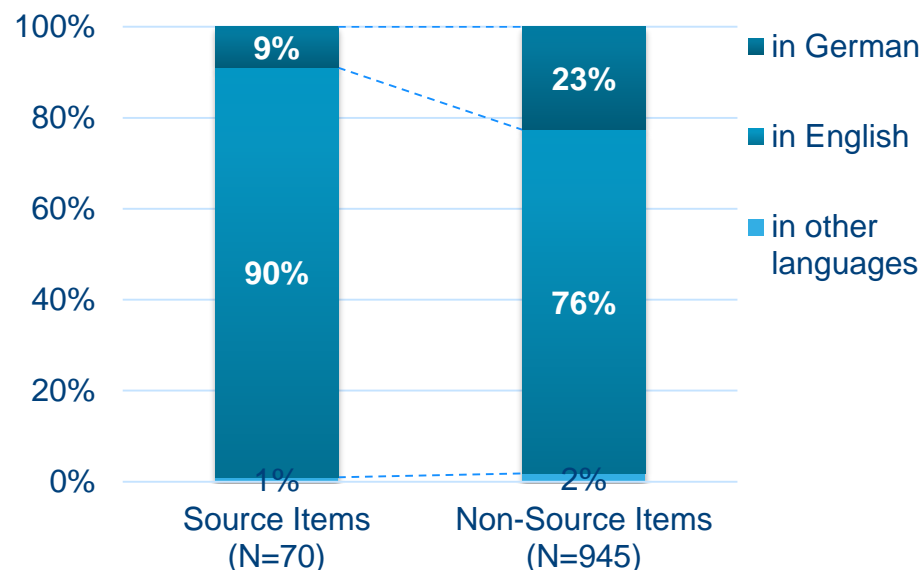

PUBLICATION

Languages of political science publications in Germany

CITATION

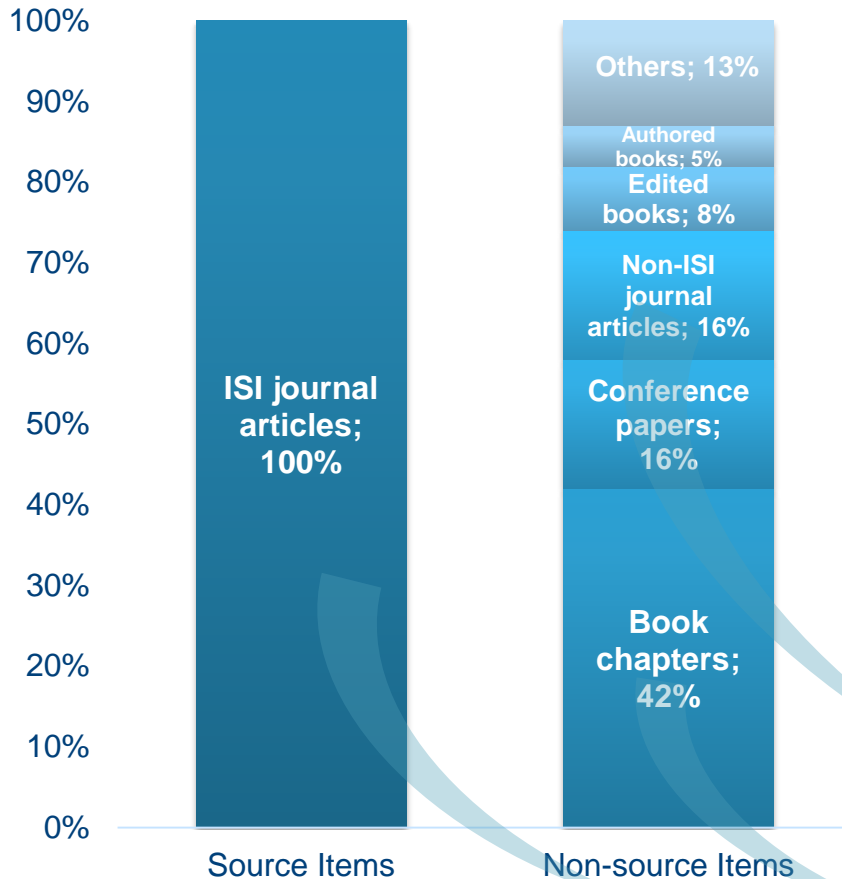

Languages of citations of political science publications in Germany

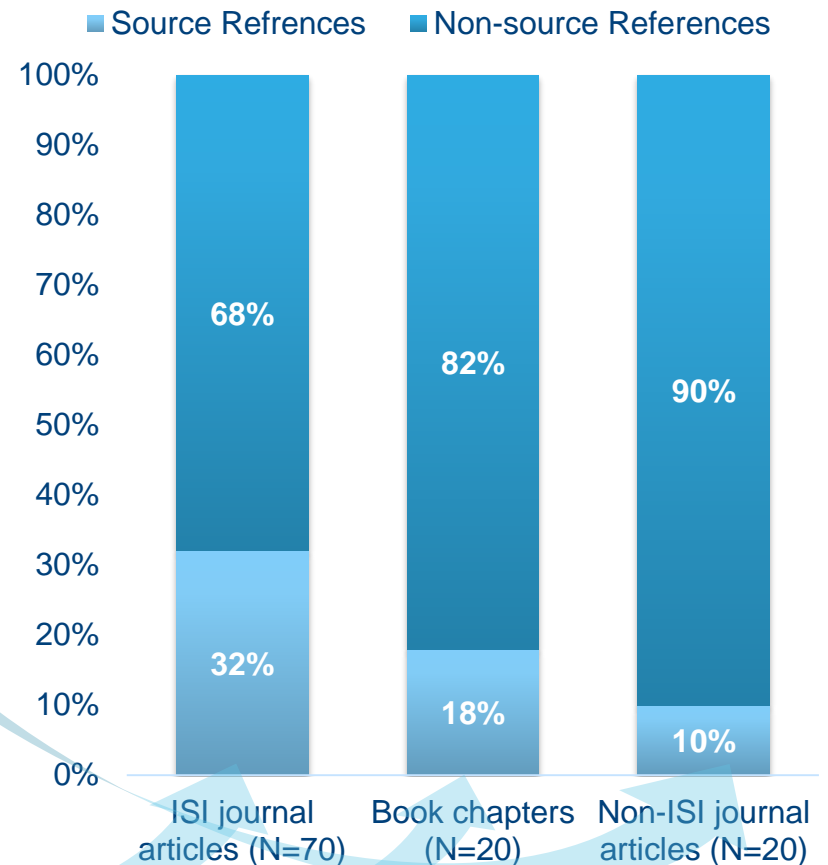

Non-source items are published in non-English language and cited by papers in non-English more than source items.

Document Type (1)

PUBLICATION

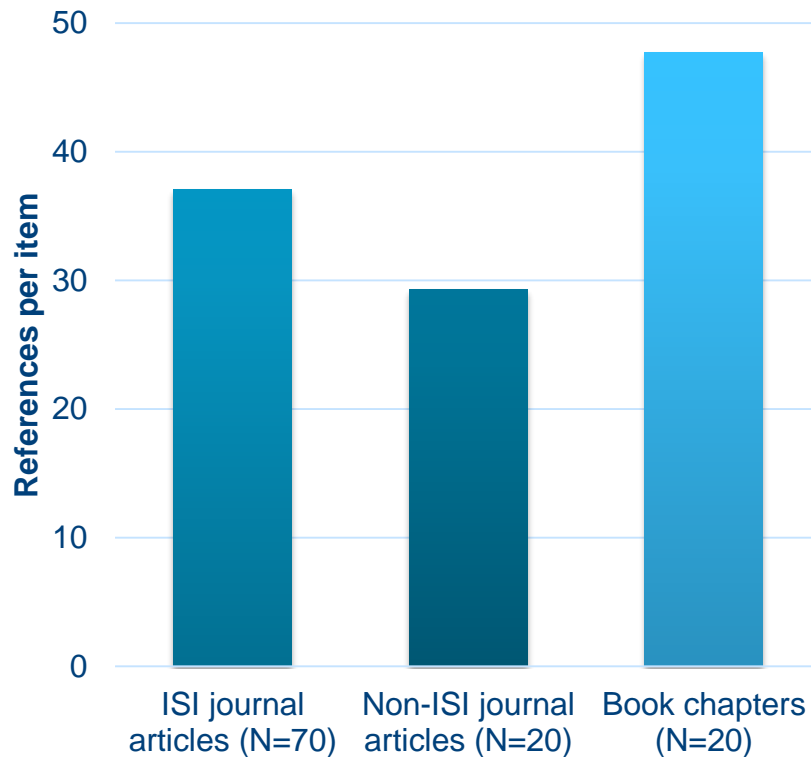

REFERENCE

Non-source items referred to more non-source references than source items.

Document Type (2)

Average reference rates of different document types

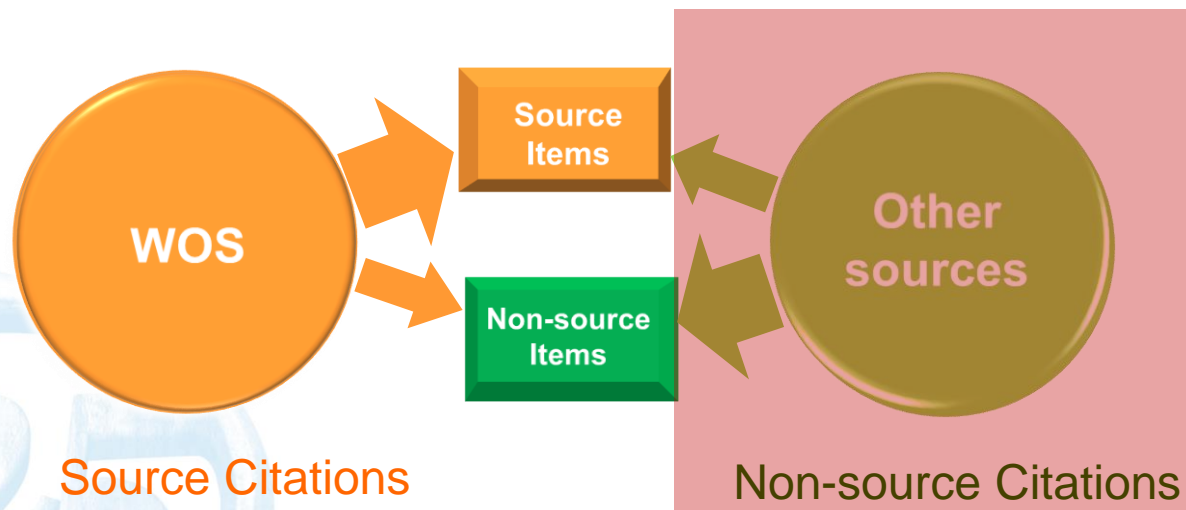

Average citation rates of different document types

Non-source items are published in non-English language and cited by papers in non-English more than source items.

Non-source items referred to more non-source references than source items.

Non-source items would be cited by non-source items more than source items, comparing to source items.

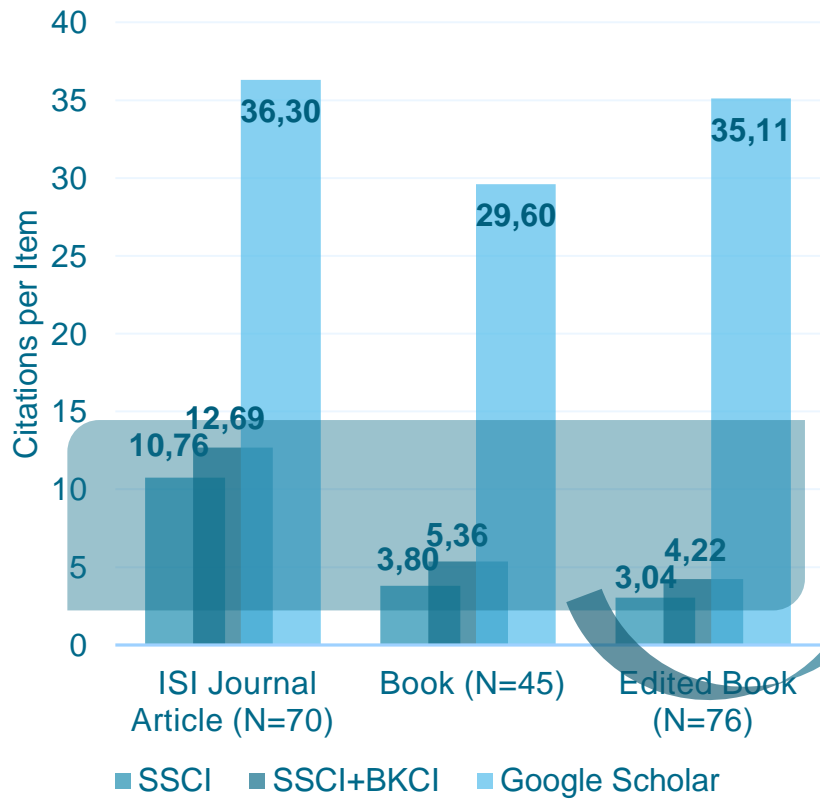

The impact of non-source items is systematically underestimated due to the missing “**non-source citations**” in WoS.

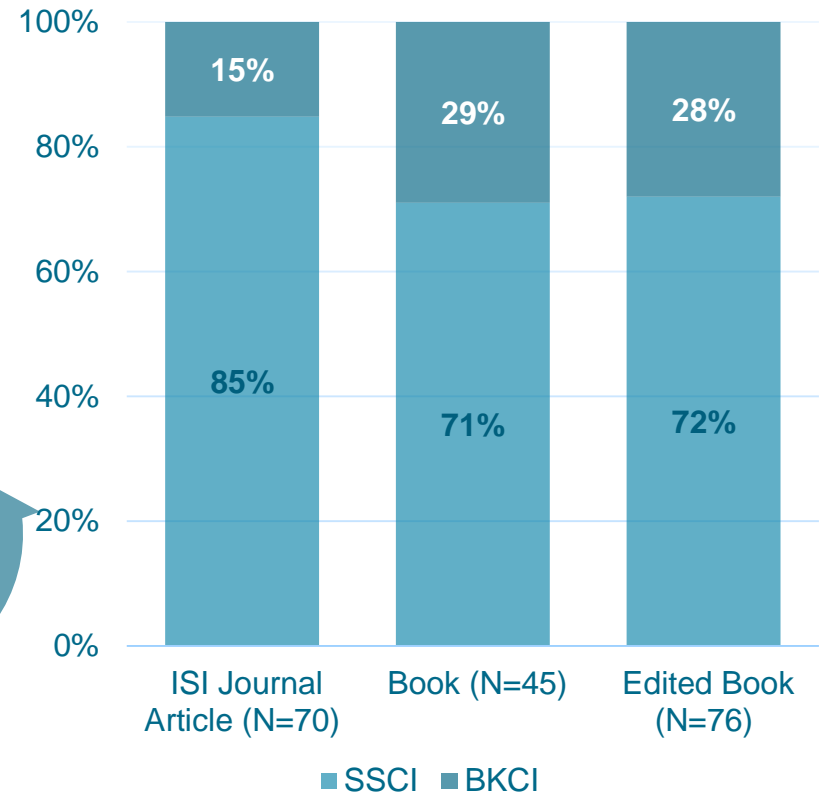

Non-source citations are important but ignored.

Other citation sources

Average citation rates from different citation sources

Shares of citations from SSCI and BKCI

Summary

- The impact of non-source items is systematically underestimated in current studies.
- Other methods to investigate non-source citations are needed.
 - a formula to estimate the comprehensive citations

	Increase in the value of the indicator “number of (estimated) citations” due to the inclusion of non-source items	Contribution of non-source items to the (estimated) citations of all publications
After applied the formula	+396%	80%
Before estimated	+150%	60%

- more comprehensive citation sources
 - BKCI
 - Google Book
 - Google Scholar

Thank you very much.
